Collection 2021

And Ceramic, co-founded in the year 2009, brings Global artfulness through the assortment of imported tiles which are provided PAN-India. A keen sense of detailing and strong design statements creates a sense of exclusivity and an element of surprise with every new launch.

Our Vision is to be perceived as one of India's leading providers of imported tiles, offering our end users an unmatched spectrum of premium design with a sharp spotlight on Exceptional Quality, Service constancy & Innovation.

Our firm is based on the Principles of Passion, Humility, Integrity & Commitment so the job gets done right, to the highest standards and within the timelines.

Having a solid network with the best retail vendors and architects across India, we have got the opportunity to supply our tiles to star-studded clientele that includes multi-national corporates, celebrity clients, leading developers & premium industrialists.

EXTRUDED TILES

Extrusion is a production category on tiles, consisting on giving shape to the tile with wet clay. While most of the tiles are pressed on dry clay, extruded is wet.

When the glazing is applied to the body, the body absorbers part of the glazing so below the glazing there is also pigment of the glaze.

The biggest advantage of extrusion is that allows you to make especial pieces in one single piece, not cutting and pasting, such as the copying pieces for the swimming pool, the steps for the stairs, etc.

However, extrusion has a different tolerance than the pressed tiles, as the regulation allows up to a 2% deviation on size or shape between pieces. This is the reason why with extrusion we recommend wide joints and not to use self-levelling spacers, since the installer shall compensate deviation of sizes with the grout, to make it look homogeneous. I attach you some installation tips we recommend for the extruded tiles.

Extrusion we obtain really resistant tiles, with high MOHS standards. It also provides a slight imperfect finish that makes the tile look more natural.

Our strength with them are the anti-slip tile of the outdoors, the special pieces, and the natural effects. Triangle, Tempo, Retro, Regles, D'anticatto, Palazzo and Tech-land are some of the lines you are getting from us extruded.

EXTRUDED TILES INSTALLATION SUGGETIONS

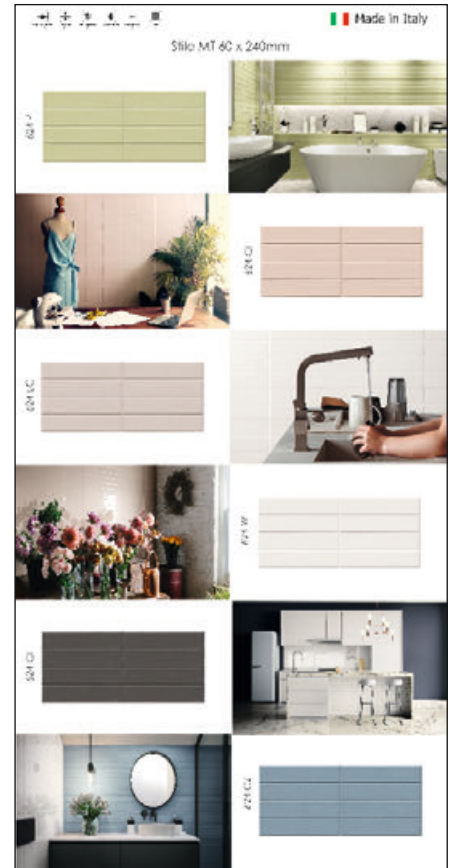

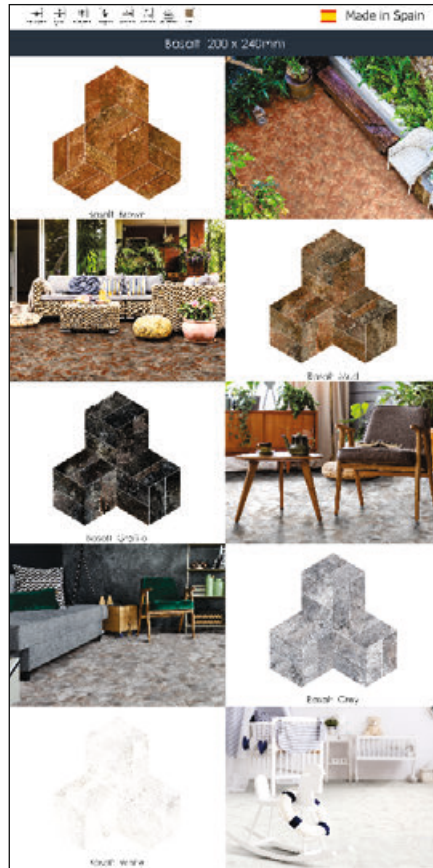

Due to the bigger size differences between pieces that can be found when dealing with extruded porcelain tiles compared with regular pressed porcelain tiles specially with rectified tiles.

If possible, please contact experienced installers. The installation of extruded tiles is not as standard as the pressed tiles or rectified. Therefore, experienced and skilled installers can make the difference.

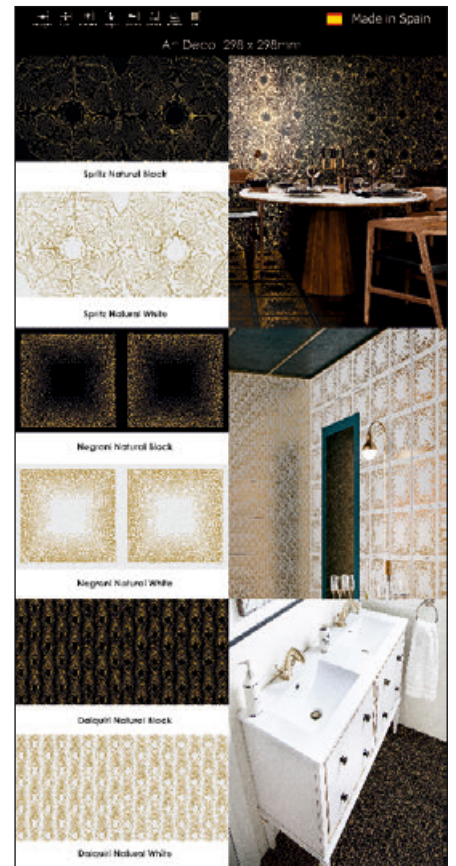

Spacers shall not be used with extruded tiles, as due to the size differences on the pieces, the composition will eventually close or open in excess. This possible size difference requires a variation on the grout thickness in order to have a fine composition.

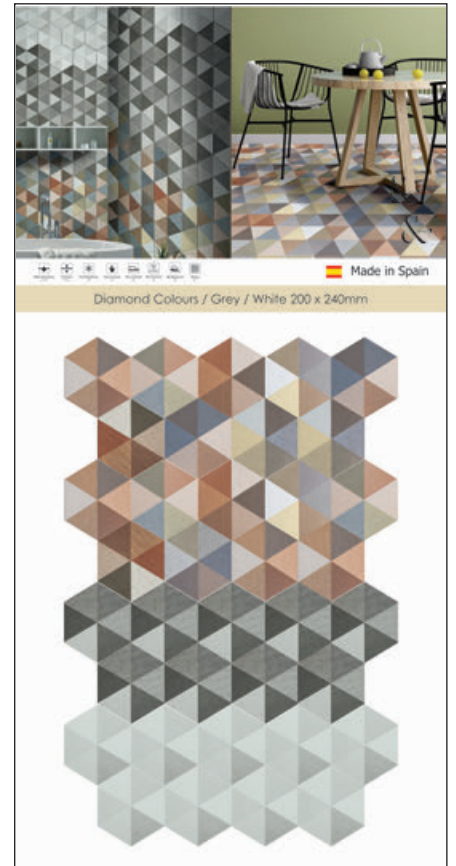

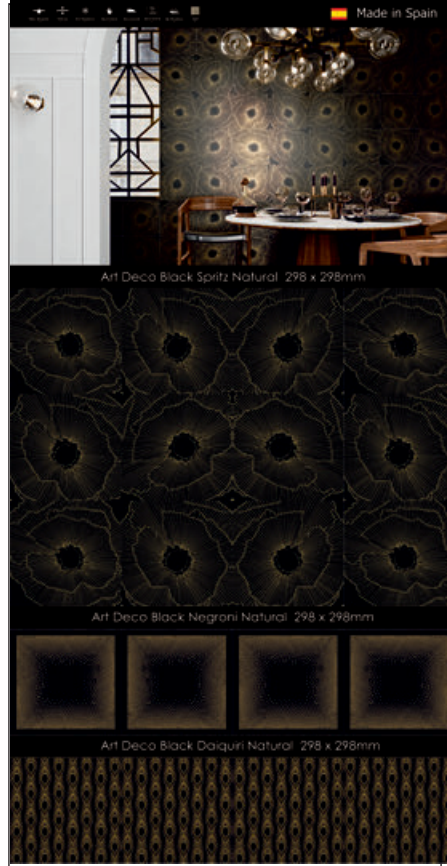

Extruded tiles can be considered by the installers as hand-made tiles. Once the installer is aware about the possible size differences, the installer can check how the pieces match on the composition before adding the adhesive. Most of the difficulties on installation are prevented by checking the pieces, and a simple action as rotating a piece, or replacing its location, can provide an optimum result.

Consider a grout thickness from 3-5mm. The greater the size of the tile, the thicker the grout will need to be. For small pieces, usually it is enough with a grout around 2-3mm, but it is very important to highlight that the thick grout gives margin on the installation. A thinner grout can be used to compensate the differences of size if there is thickness enough.
